

Thresholds/Monitoring/Sampling

Monitoring: Codling Moth, Apple, Pear

J. Franklin Howell and Ron Britt  
Yakima, WA

*Keywords:* codling moth, apple, pear

The pros and cons of the following monitoring/sampling methods for assessing mating disruption will be discussed: Pheromone traps, virgin female baited traps, tethered females, mating tables, hand sampling, vacuum sampling, bait traps, blacklight traps, pane traps, progeny per female, fruit infestation. Also discussed will be using trap catch data for quick assessment of mating disruption for scouts and fieldmen.
